Summary

Computer Science graduate with a Mathematics minor and hands-on data engineering experience building resilient production pipelines, analytical models, and automated reporting systems. Adaptable problem solver focused on optimizing workflows by grounding modern AI tools and analytical frameworks in rigorous computational and statistical fundamentals.

Experience

Warner Bros. Discovery Sep 2025 – Jul 2026

Data Engineer Intern (Onsite – Hyderabad)

- Built end-to-end data pipelines for diverse analytics and operational use cases, supporting cross-functional requirements across product, marketing, and subscriber retention teams.
- Architected an automated **Churn & Revenue forecasting pipeline** using **Python** and **SQL**, reducing reporting turnaround from days to minutes with variance bounded within a **±3% error margin**.
- Designed executive **Looker** dashboards tracking churn, revenue, and subscriber retention; laid the foundation for a scalable data model adopted for global rollout across HBO Max.
- Analyzed APAC vs. Global product feature launch metrics and user engagement, presenting strategic findings directly to global executive leadership.
- Provided mission-critical launch support for **HBO Max Wave 3 & 4**, actively monitoring data streams, diagnosing pipeline bottlenecks, and escalating real-time risk reports to senior management.
- Conducted exploratory data analysis (EDA) and supported production deployment of predictive **Voluntary and Involuntary Churn models** across APAC markets.
- Standardized CI/CD practices across the data organization by developing **Databricks Asset Bundles (DABs)** and unified GitHub repository standards.
- Achieved **Top 7** in the internal **DBX-WBD Ideathon**, standing out as the **sole intern** among competing enterprise engineering teams.

Lilac Infotech – Software Campus Jul 2024 – Jan 2025

MERN Stack Trainee (Hybrid)

- Built responsive web applications using **React.js**, **Node.js**, and **Express.js**, integrating RESTful endpoints with MongoDB.
- Streamlined deployment workflows across team branches using structured **Git** collaboration practices.

EDUNET Foundation Jun 2024 – Jul 2024

Data Analyst Intern (Remote)

- Performed automated exploratory data analysis (EDA) across diverse datasets using **Pandas**, **Matplotlib**, and **Seaborn**.
- Built metric-driven visual reports and analytical dashboards to identify key performance trends and drive operational decisions.

Technical Skills

Languages (Tech):	Python, SQL, JavaScript (ES6+), Java
Data Engineering:	Databricks, Databricks Asset Bundles (DABs), ETL Pipelines, Medallion Architecture, SQL Server, MySQL, MongoDB, pyodbc
Data Science & ML:	Scikit-learn, Pandas, NumPy, Predictive Modeling, Hyperparameter Tuning (Grid-SearchCV), Dimensionality Reduction (PCA, LDA)
Cloud, BI & DevOps:	Looker, Docker, AWS (Core Services), Power BI, Tableau, Git, GitHub CI/CD
Developer Tools:	FastAPI, Streamlit, Jupyter Notebook, REST APIs, Swagger UI, VS Code
Core Concepts:	Data Warehousing, Dimensional Modeling, Feature Engineering, OOPs, Data Structures & Algorithms, SDLC
Languages (Spoken):	English (Fluent), Malayalam (Native), Hindi (Professional), Tamil (Elementary), Telugu (Elementary)

Projects

- **Modern Data Warehouse (Docker-Based Medallion Architecture)**
Engineered an end-to-end cloud-ready data warehouse using SQL Server and Docker, implementing a multi-hop Medallion Architecture (Bronze, Silver, Gold).
 - Ingested raw multi-source CSV extracts into the **Bronze Layer** to ensure immutable auditability and traceability.

- Automated validation, deduplication, and staging into the **Silver Layer** using optimized **SQL** and **Python (pandas, pyodbc)**.
- Architected star-schema dimensional models with surrogate keys in the **Gold Layer** (Fact & Dimension tables) for performant querying.
- Containerized the full infrastructure using **Docker**, ensuring consistent reproducible environments across analytics workloads.
- **Predictive Health Classification Pipeline**
Built an end-to-end Machine Learning pipeline to evaluate biometric health markers and classify cessation status.
 - Conducted high-dimensional feature preprocessing using **PCA**, **LDA**, and statistical outlier detection.
 - Benchmarked multiple classifiers and built an ensemble **VotingClassifier**, achieving a **0.83 ROC-AUC** score via **GridSearchCV**.
 - Assessed clustering and separation performance using **Silhouette Score**, **Davies-Bouldin Index**, and precision-recall trade-offs.
- **PremiumPredictor AI (Full-Stack ML Microservice)**
Developed an interactive predictive microservice serving real-time actuarial risk tier classifications.
 - Developed a lightweight, modular backend using **FastAPI** with integrated Swagger UI documentation and custom JSON schemas.
 - Connected a dynamic **Streamlit** frontend interface that processes user biometrics and lifestyle parameters with sub-second latency.

Education

SRM University, Andhra Pradesh	Oct 2022 – Jul 2026
B.Tech in Computer Science & Engineering (<i>25% Scholarship</i>)	CGPA: 8.91 / 10
<i>Minor in Mathematics</i>	Jul 2023 – May 2026

St. Mary’s E.M. School, Kozhikode

Class 12 (ISC): **91.25%** | Class 10 (ICSE): **97.00%**

Certifications

- **AWS Cloud Technical Essentials** – Amazon Web Services / Coursera (Cloud Architecture, Compute, IAM & Storage)
